

Introduction to Javascript

JavaScript is a programming language used to make websites interactive and dynamic. It lets you add features like button clicks, form validation, animations, and live content updates on web pages.

JavaScript is a programming language used to perform mathematical calculations, add logic, and create interactive and dynamic behavior on websites.

it will also help you to manipulate html page. Like changing the name

JavaScript was created in just 10 days by Brendan Eich in 1995.

Browser understand html,css and JS.

you can inspect the window and go to the console and it will do calculation for you also when you give the input.

Q: What is the V8 Engine?

V8 Engine is a JavaScript engine developed by Google that converts JavaScript code into fast machine code and executes it efficiently.

It is used in Google Chrome and Node.js to run JavaScript outside the browser as well.

Q: What language is used in the V8 Engine?

A: The V8 Engine is primarily written in C++ and uses some JavaScript internally for built-in functions.

Q: What is Node.js?

A: Node.js is a runtime environment that allows JavaScript to run outside the browser using the V8 engine
